

High-Performance Drying Tumblers for Vended Laundries

The advanced engineering of ExpressDry+ Dryers simplifies installation and ease of use, drastically reduces gas consumption and downtime, and boosts profit potential. Reliable and efficient, ExpressDry+ Drying Tumblers are available in 30-, 55- and 75-pound capacity single-pocket units, and 30- and 45-pound capacity dual-pocket stacks and all NEW standard reversing cylinders.

Unmatched Energy-Efficiency

- The twin motors driven by OneDrive, an inverter motor control, combine to reduce start up time, require less amperage at ramp up, deliver precise speed control and lower noise levels.
- An instant electronic-spark ignition and modular electrical system contribute to reliability and easy servicing.
- A multiple-burner heat system efficiently and quickly reaches desired temperatures.
- An enclosed heat system captures intake air and preheats it before entering the tumbler — reducing energy costs without increasing dry time.

Standard Reversing

- Gives the owner the option to go with standard or reversing options — enhancing customer options and increasing store throughput
- Standard feature on all single-phase models
- Improves quality and provides a more even dry, especially on large, bulkier items
- Allows the owner to offer drying for a premium price

Profit-Boosting Stack Models

- Two stack dryer models:
 - SuperStack90 with two 45-pound capacity pockets
 - Stack60 with two 30-pound capacity pockets
- Stack models deliver robust drying capacity within a compact footprint — boosting customer turnover and profit potential.
- They fit easily through a standard 34.5-inch door for simple installation.
- Separate coin vaults ensure more total vault capacity, which equates to less time spent collecting coins.

Superior Load Drying

Axial Airflow | 30-, 45- & 55-Pound Capacity Dryers

- Engineered with axial airflow, heated air is direct through the load from back to front.
- Perforated cylinders and drum lifters maximize airflow and tumbling action while preventing tangling for fast, efficient drying.

Radial Airflow | 75-Pound Capacity Dryers

- Radial airflow ensures heated intake air is captured in the drum and evenly distributed throughout the cylinder.
- Radial airflow ensures maximum load separation for big loads and bulky items and utilizes the tumbler's complete capacity for quick, even drying.

Simple Installation

- A smaller footprint allow more tumblers installed per square foot,
- Each dryer requires one exhaust connection and one gas connection.
- Since the dryers only require a simple 120V/20 amp breaker and 12-gauge wire, they are less expensive to install and operate.

Durability is Unmatched

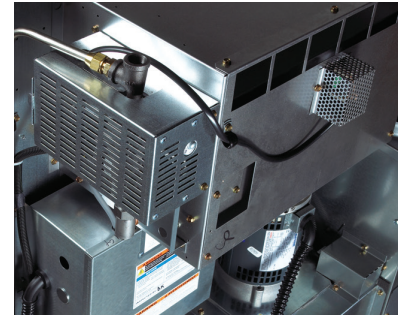

- Dual motors provide separate power for basket rotation and airflow
- Stainless steel cylinders feature mirror-polished, stainless-steel backplates for unsurpassed durability and reduced linen wear.
- Durable kick-plates, cart bumpers and door bars protect the dryers from outside impacts.
- Oversized doors, constructed from premium steel and secured with heavy-duty hinges, facilitate easy loading and unloading.
- An automatic high-limit thermostat allows the dryer to achieve a set temperature.
- Backed by an industry-leading warranty.

Control Options

- ExpressDry+ Dryers feature two control options: Basic and Microprocessor.
- Touch-sensitive controls feature a clear, prominent display that's glove friendly and durable.
- Offer unrivaled programmability and diagnostic capabilities, as well as simple operation.
- Featuring an LED display and five cycle types — High Temp, Med Temp, Low Temp, Delicates and No Heat — operation couldn't be simpler. (No Heat only available on Microprocessor Control)
- The controls seamlessly interfaces with most alternative payment systems and/or accepts multiple coin-drop options, including quarters, tokens, dual drop, dual denomination and world drop.
- Storeowners can program multiple variables of the drying process: time, temperature, automatic reversing and cool-down, along with vend price, time-of-day and day-of-week pricing.
- The controls offer an advanced diagnostics system and an auditing ability that details total number of cycles, coins or start pulses for card systems, and total top-offs performed.

Ergonomic & Easy to Maintain

- Self-cleaning lint screens support maximum airflow. (only available on single pocket capacities)
- Components are easily accessible.
- An automatic backdraft damper prevents outside air from entering the laundry.
- Oversized steel doors with reinforced metal door bars and hinges for superb ergonomics and durability.
- With a minimum rear clearance of 18 inches, safety guards and a fully enclosed rear area provide attendant protection.
